Project Case Study

Where Modern Hospitality Takes Shape
— Gun Lake Casino Resort

 *Objectives*

Supporting the launch of Gun Lake Casino Resort’s new hotel tower meant aligning with a vision to redefine luxury hospitality in West Michigan. From guestrooms to the Chairman’s Suite and the two-story Ogema Suite, each space called for custom frameless shower enclosures that complemented the architect’s organic design narrative while elevating the bath environment.

 *Challenges*

Supplying enclosures across a diverse mix of accommodations required manufacturing expertise, thoughtful coordination, and the flexibility to support both design intent and construction timelines. HMI Multi-Unit delivered a refined solution that ensured visual consistency throughout the tower while reinforcing the warm, nature-inspired interiors central to the resort experience.
